Mission Statement: The Radiography Program is a comprehensive two-year degree program, which provides its students a high quality, customer service, competency-based didactic and clinical education. The education provided prepares the students to enter the entry-level job market in diagnostic radiology, allows them to transfer to other colleges, prepares them for sub-specialty areas, as well as instills life-long learning values, and assists them in achieving their professional and personal goals.

GOAL 1: Students will have the knowledge and skills to be clinically competent.

*Student learning outcomes:*
- Students will appropriately position patients.
- The student will learn and apply radiation safety with respect to the patient.

GOAL 2: Students will be able to communicate effectively.

*Student learning outcomes:*
- The student/graduate will be able to communicate effectively with patients.
- The students will demonstrate effective written communication.

GOAL 3: The Program will provide employable Radiographers to meet the needs of the community.

*Student learning outcomes:*
- Graduates will pass the ARRT exam on the first attempt.
- Graduates will obtain employment in radiography.
- Employers will indicate an overall satisfaction with the graduates’ performance.
- The Program will graduate 70% of its starting class.
- The graduates will be satisfied with the Program.

GOAL 4: Students will develop problem-solving and critical-thinking skills.

*Student learning outcomes:*
- Students will perform non-routine procedures.
- Students will evaluate images for appropriate positioning and image quality.

GOAL 5: Students will demonstrate professional growth.

*Student learning outcomes:*
- Students will understand ethical decision-making.
- The student will understand the importance of staying current in the profession.
- The student will understand the value of advancing professionally.
