

BECOME AN EPA CERTIFIED LEAD RENOVATOR.

Don't put yourself, your customers, or your business in jeopardy. Become an EPA certified lead renovator in only eight hours.

The Clean Energy Center's **EPA Certified Lead Renovator** course meets the requirements for lead-safe work practices training under EPA's Renovation, Repair, and Paint (RRP) Rule and HUD's Lead Safe Housing Rule. It is taught under the accreditation of the EnviroEd.

DO THE RULES APPLY TO ME?

EPA's RRP Rule and HUD's Lead Safe Housing Rule apply to anyone receiving payment to perform work that disturbs paint in housing or child-occupied facilities built prior to 1978. This includes all firms and sole proprietorships.

- ◇ General contractors
- ◇ Special trade contractors (painters, plumbers, carpenters, electricians, etc.)
- ◇ Residential rental property owners and managers
- ◇ Maintenance workers in multi-family HUD housing

MAINTAINING YOUR CERTIFICATION

Certified Lead Renovators must recertify every five (5) years. The recertification process is quick and simple. The center's four-hour refresher course satisfies the requirements for certification renewal.

A TRUSTED TRAINING PROVIDER

We teach energy efficiency rooted in building science. The Clean Energy Center at Penn College is a nationally-recognized training center and BPI Test Center with over three decades of experience providing training and technical assistance to home energy professionals, commercial building operators, government, utility companies, and other industry partners in the building performance field.
